About the manufacturer – GESA Termómetros (Spain)

GESA Termómetros S.L., based in Urduliz in the Basque Country, has been making pressure and temperature instruments to DIN, EN, ASTM and BS standards for over 50 years. Its gauges and thermometers are used in shipyards and on fishing vessels, in heating and refrigeration, and in the chemical and food industries. GESA runs its own calibration laboratory – instruments can be supplied with calibration certificates traceable to ENAC (the Spanish accreditation body).

We present a selection of the products most useful for ship supply. Other items from the GESA catalogue – and other ranges, sizes and connections – are available on request.
