About the manufacturer – HERO Life-Saving Equipment

HERO Life-Saving Equipment is part of a European group that has been active in the shipping industry for more than 40 years, with branch offices in Belgium, France, Spain and Shanghai. The company designs, certifies and manufactures equipment for the marine industry. Its headquarters in Barcelona house strategy, design, engineering, approval and quality control.

Since 2019 the company has produced liferafts under its own HERO brand. They are designed and developed in the European Union, with materials selected to give the best possible protection in severe weather and the highest comfort inside the raft. HERO liferafts hold French M.M.F. (Marine Marchande Française) approval issued by RINA and Spanish approval (D.G.M.M.); the commercial models are MED approved.

The production plant is ISO 9001 certified. Internal quality control covers more than 100 checkpoints, and the entire production chain is certified and continuously monitored by RINA, an independent third party. HERO keeps developing new products to improve safety at sea and supports initiatives to protect the oceans.
