Light-Smoke-Signal with bracket ManOverBoard (MOB) CF4, SOLAS, PyroPol

Combined Light & Smoke Man-Over-Board Lifebuoy Marker for use by day and night with a unique 360° light-emitting LED, all-round visibility

The PyroPol ManOverBoard CF4 – SOLAS/MED approved – is a combined Light & Smoke Signal and especially designed for the connection with a lifebuoy for position marking by day and night and to indicate wind direction during rescue operations. Safe use even on petrol or oil-covered water.

The signal provides 15 minutes of dense orange smoke combined with a unique 360° LED light ring for all-around visibility!. The self-activated light has a minimum output of 2 candela for at least 2 hours.

It is automatically deployed – by releasing an attached lifebuoy – or can be manually activated.

Approved mounting height is 30 meters but the manufacturer tested and permitted up to 200 meters to qualify the ManOverBoard CF4 far beyond the traditional shipping for use on oil and gas rigs, offshore wind turbines an aircrafts.

The signal is designed to be “fit and forget” for its entire service life.
A light test can be performed if required.
